

Stage E Budget-50 Online Success Trajectory

Mean across seeds 7, 13, and 29; shaded bands show SEM. Final held-out scores are checkpoint-level, not per-context measurements.

Cumulative Online Success

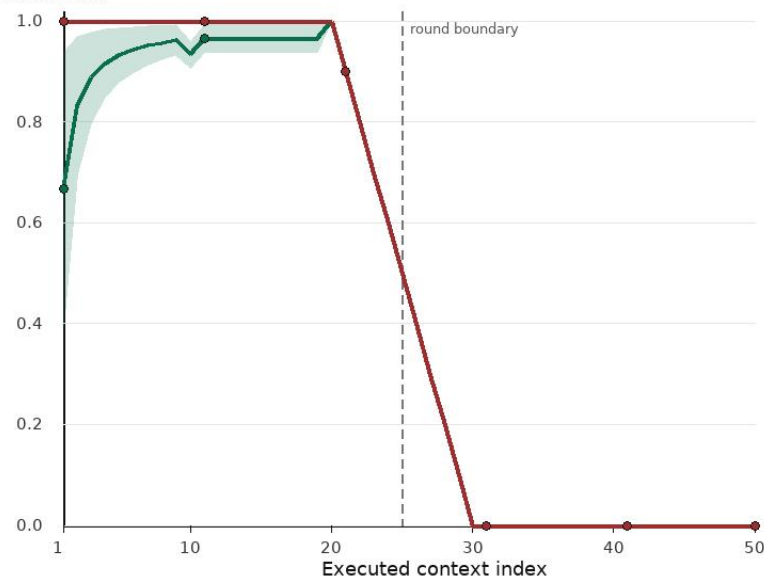

Success rate

—●— CAVR
—●— Real-only

Rolling Online Success, Last 10 Contexts

Success rate

Final online success: CAVR 0.387, real-only 0.400
Final held-out test delta: +0.010
CAVR uses 11.3x fewer admitted demo items at N=50.

Interpretation: the x-axis is online executed context order. Because contexts are task-family ordered, this curve is not a monotone held-out learning curve.
